

Photonic Materials, A. Polman (2017-2022)

Biography

Prof. Albert Polman is program leader of the Light Management in new Photovoltaic Materials (LMPV) Program at the NWO Institute AMOLF in Amsterdam and professor of photonic materials for photovoltaics at the University of Amsterdam. He was director of AMOLF from 2006 to 2013.

Polman is one of the early pioneers of the research field of nanophotonics, a highly active research area worldwide. Polman's research group focuses on the study of fundamental light-matter interactions at the nanoscale. He studies light management at the nanoscale to realize solar cells with ultra-high efficiency that can be made at low costs. He develops optical metasurfaces for analog optical processing and develops cathodoluminescence spectroscopy as nanoscale imaging and spectroscopy technique.

Polman has published over 350 papers that were cited over 39.000 times. He is member of the Royal Netherlands Academy of Arts and Sciences (KNAW) and was elected in the inaugural class of the new Netherlands Academy of Engineering. He has won several awards for his work, including the ENI Renewable Energy Award (with Harry Atwater), the Science of Light Prize of the European Physical Society, the MRS Materials Characterization Award, the Physica prize of the Dutch Physical Society, and the Julius Springer Prize in Applied Physics. He was highly cited researcher in 2017-2019, was awarded three ERC Advanced Grants (2011, 2016, 2021) and has given over 200 keynote and invited talks at international conferences and workshops. Polman is co-founder of Delmic BV that brings an instrument for cathodoluminescence spectroscopy on the market that was developed in his group. Polman leads the Dutch national research, innovation and industrial development program SolarNL (www.solarnl.eu, 898 million euro) to build up and strengthen the photovoltaics industry in the Netherlands and Europe.
