

Resonant Nanophotonics, A. F. Koenderink (2017-2022)

Biography

Femius Koenderink (1976) studied Experimental Physics (MSc 1998, cum laude) and Mathematics (MSc 1999, cum laude) at Utrecht University. He did his PhD studies in the field of light emission and scattering in 3D photonic crystals at the University of Amsterdam in the group of Ad Lagendijk and Willem Vos (2003, cum laude). From 2003-2005 he worked as postdoc in the Nano-Optics group of Vahid Sandoghdar at ETH Zürich. After a VENI postdoctoral fellowship in the team of Albert Polman, at AMOLF he became group leader of the “Resonant Nanophotonics” group in 2008, and Department Head Nanophotonics in 2016. Since 2012 he is also affiliated as professor at the Institute of Physics, University of Amsterdam. He received the NWO Veni, Vidi and Vici personal talent awards, as well as the ACS Photonics Young Investigator Lectureship (2018) and was elected member of DJA (The Young Academy of the Royal Dutch Academy of Sciences (KNAW)) in 2012, , and Optica Fellow in 2022.

Femius Koenderink is fascinated by the physics of subwavelength strongly scattering resonant structures to control propagation, emission, detection, and amplification of light. His work sits at the interface of plasmonics, metasurfaces, nanoscopy of single nano-objects and the field of light-matter interaction at the level of single molecules and single photon sources. His work includes both theory and experiments, and his group develops state of the art optical techniques including superresolution mapping of local density of states, polarization and phase-resolved Fourier microscopy technique to quantify far-field radiation patterns in emission and scattering from single nano-objects, and the realization of high-Q hybrid plasmonic-photonic resonator systems. Alongside his fundamental research interests he has longstanding industrial collaborations in the domains of solid-state lighting (with Philips, Signify, Lumileds), and scatterometry for wafer metrology (with ARCNL and ASML).
